

RENZO AGUSTIN GUTIERREZ

Senior Flutter Developer | Mobile Engineer (Android & iOS)

Córdoba, Argentina | agustingutierrez197@gmail.com | linkedin.com/in/agusg197 |
github.com/agusg197

PROFESSIONAL SUMMARY

Senior Flutter Developer with 5+ years building, shipping and maintaining production Android and iOS applications, and 7+ years in software development overall. Delivered core banking features for a Mexican fintech app handling 100,000+ monthly transactions with a 99.8%+ crash-free rate. Expert in Dart, state management (Riverpod, BLoC, Provider), Clean Architecture, REST API and Firebase integration, CI/CD automation with Fastlane, and end-to-end release ownership on the App Store and Google Play. Experienced mobile lead in remote, distributed Agile/Scrum teams.

CORE SKILLS

Mobile: Flutter, Dart, Android, iOS, Material Design, Cupertino, responsive/adaptive layouts, animations

State Management: Riverpod, BLoC, Cubit, Provider, Redux, MobX

Architecture: Clean Architecture, MVVM, feature-first modular structure, dependency injection, SOLID

Backend & Integration: RESTful APIs, JSON, Firebase (Authentication, Firestore, Storage), SQLite, local persistence

Testing & Quality: Unit testing, widget testing, code review, performance profiling (Flutter DevTools)

CI/CD & Tools: Git, GitHub, Bitbucket Pipelines, Fastlane, Azure (SSH), GitHub Copilot, Claude

Release Management: App Store Connect, Google Play Console, versioning, store submission and review

Methodologies: Agile, Scrum, sprint planning, remote cross-functional collaboration

PROFESSIONAL EXPERIENCE

Flutter Developer (Contract) — Crediclub, Digital Bank (via Zafirus)

Remote, Mexico | November 2025 – June 2026 (held in parallel with Leadbox Inc.)

- Developed and shipped core banking features for transfers and payments in a production Flutter app supporting 100,000+ active monthly transactions across Mexico.
- Architected feature-level state management with Riverpod, eliminating redundant widget rebuilds and helping keep the crash-free rate above 99.8%.
- Delivered 6 production releases to the App Store and Google Play in 8 months, meeting every scheduled date and passing the bank's security and compliance review on each submission.
- Built new screens and user flows with Material Design and Cupertino widgets, respecting native platform conventions on Android and iOS.
- Integrated Firebase services (Authentication, Firestore, Storage) and RESTful APIs with the bank's backend infrastructure in a regulated fintech environment.
- Collaborated daily with Product, Design, QA and backend engineers; reference available from the Product Manager on request.

Flutter Developer — Mobile Lead — Leadbox Inc.

Remote | February 2021 – Present

- Lead the mobile application area: sprint planning, technical decisions, code review, estimation and release delivery in an Agile/Scrum workflow.
- Leading the migration of a complex web platform (Leadbox-OS) to a cross-platform Flutter application for Android and iOS, defining a scalable state management architecture with Riverpod.
- Built CI/CD pipelines for mobile builds and store deployment with Bitbucket Pipelines and Fastlane, cutting manual release overhead by ~50%.
- Refactored the core architecture into modular BLoC/Provider patterns, reducing code duplication and accelerating integration of new backend REST APIs.

- Optimized local storage (SQLite) and image caching, lowering memory usage and keeping UI transitions consistently at 60fps.
- Introduced AI-assisted development workflows (GitHub Copilot, Claude) into daily feature work and code review, increasing delivery velocity without reducing code quality.

Front-End Developer — Freelance

Remote | 2019 – 2021

- Built and delivered 8+ custom web applications with React and Angular for international clients, with a 100% on-time delivery record.
- Implemented state management with Redux and MobX and integrated applications with RESTful APIs.
- Ran peer code reviews and unit testing, measurably reducing post-launch bug reports; retained 80% of clients for follow-up projects or maintenance retainers.

SELECTED PROJECT

Trino — Voice-to-Record Expense Tracker (Flutter / Dart, LLM-powered)

Personal project | github.com/agusg197

- Built an offline-first Android app (~7,000 lines of Dart, 240 automated tests, clean static analysis) that turns a spoken phrase into a structured expense record via a two-stage speech-to-text + LLM pipeline.
- Designed interface-driven architecture (STT, LLM client, persistence, audio behind swappable implementations) enabling full test coverage without platform channels; SQLite persistence with drift.
- Implemented an evaluation harness with 18 fixtures and 6 micro-averaged metrics to compare LLM models on accuracy, hallucination rate and latency before shipping.

Tiza — Whiteboard-to-Markdown OCR App (Flutter / Dart, on-device ML)

Personal project | github.com/agusg197

- Built an Android app that converts whiteboard/handwriting photos into structured markdown using a hybrid pipeline: free on-device OCR (Google ML Kit) plus a single, user-triggered LLM call (104 automated tests).
- Implemented an XY-cut page segmentation algorithm, three interchangeable layout serializers, strict schema validation, and seven recoverable error states — each covered by tests.

LANGUAGES

Spanish: Native **English:** B1, professional working proficiency — comfortable in daily standups, technical discussion and written communication.
